Detect Indefinite and Infinite in an Array

IUWEED scans a vector and returns the address of the first quantity which is either 'indefinite' or 'infinite'.

Structure:

FUNCTION subprogram
User Entry Names: IUWEED

Usage:

```
IW = IUWEED(IVEC,N)
```

sets IW to the relative address, in the N element vector IVEC, of the first element containing either an 'indefinite' or 'infinite'. IW = 0 if there are no such elements. IVEC is not changed.
